Cut Costs by Preventing and Reducing Downtime

Gather Real-Time Data About Safety Systems

In-Series Diagnostics gives machine owners and operators greater insight into the health and performance of their equipment, making them less reliant on outside experts to solve system problems. Users can monitor the status of each device in their safety system in real-time, identify the location and nature of any potential problems, and receive alerts if a critical event does occur, so equipment can get back up and running as soon as possible.

Reduce and Simplify Wiring

Cost-Effective and Easy to Implement

Connect up to 32 ISD devices in a series chain using plug-and-play industry standard M12 4-pin cables and T-connectors. The ISD protocol overlays the diagnostic data for each device on top of the safety OSSD signal wires, delivering the highest level of safety and advanced diagnostic over two wires. This error-proofs the system, reduces controller I/O, and eliminates the time, hassle, and expense of running designated cables between the device and control panel.

Intuitive Setup and PLC Integration

Easy to Design and Implement

Create a safety configuration in mere minutes with the free PC software, which provides an intuitive on-screen interface incorporating drag-and-drop icons. Download the configuration using the XM3 external memory drive, no PC required. Integration with the PLC is made easy with the export-tag feature that automates the typical manual entry of tag values in the PLC. Quickly set the controller's IP address using the on-board LCD display via the ClickSet IP feature.

ISD-Enabled Products by Banner

SC10 Safety Controller

- Safety Controller + ISD to PLC Gateway
- Easy to configure with free PC software
- Connect up to 64 ISD devices
- Supports up to 70 total safety devices
- Two independently controlled 6A safety relay outputs
- Profient, Ethernet/IP, Modbus TCP

XS26-ISDd Safety Controller

- Safety Controller + ISD to PLC Gateway
- Easy to configure with free PC software
- Connect up to 256 ISD devices
- Expandable up to: 394 total safety devices and 68 safety outputs
- Profient, Ethernet/IP, Modbus TCP

ISD to IO-Link Modules

- Compact field device
- ISD to IO-Link Gateway
- Connect up to 32 ISD devices
- Easily daisy-chain to a separate safety relay or controller
- IP20 and IP69 models available

RFID Safety Switches

- High tolerance to misalignment
- Provides data to prevent downtime
- Basic, medium, and high-tamper-resistance models available
- Features an IP69 rating and resistance to both vibration and metal shavings
- Cascade up to 32 ISD devices while achieving the highest level of safety

Illuminated E-Stops

- Illuminated base flashes red to quickly identify which button has been pressed
- Illuminated base is green, yellow, or unlit to indicate it is armed and ready for operation
- Unique OSSD safety outputs simplify wiring and allow it to be included in an In-Series Diagnostics (ISD) chain
- Cascade up to 32 ISD devices while achieving the highest level of safety

Add Other Safety Devices to an ISD Chain

In-Series Diagnostics System Overview

EtherNet/IP[®]

ISD Connect

- Add any safety device with two normally closed sets of contacts to an ISD chain
- Bright LEDs for simplified local diagnostics
- Flexible mounting in any orientation with integral mounting hole and visible LEDs on both sides
- Add up to 32 non-ISD devices to an ISD chain and achieve the highest level of safety

Compatible with ISD Connect

SSA-EB1P-02-A01 30 mm Panel-Mounted E-Stop with M12 QD Pigtail

SI-GL42 Locking Safety Switch

SI-HGZ63FQDxx SI-HG63 Series Hinged Safety Switch

MQEAC-601-Q5A SI-HG63 to ISD Connect Adapter Cable

CSE5A-M1251M1251 Two Mechanical Switches to ISD Connect Adapter Cable

Easy to Implement with AutoDetect ISD

Upon initial power-up, the system activates AutoDetect ISD, which identifies devices added to the ISD chains and informs the PLC of these changes. With this new feature, users can add up to 256 ISD devices with a few clicks of a mouse. It provides flexibility for dynamic safety system configurations—users can add, move, or remove safety devices as needed, and then easily error-proof the entire safety system prior to deployment.

A Guide to Completing Your Safety System

- Simplified wiring using T-adapters and cost-effective 4-pin cables
- Achieves the highest level of safety; up to Category 4, PL e, SIL CL 3

RFID Safety Switches

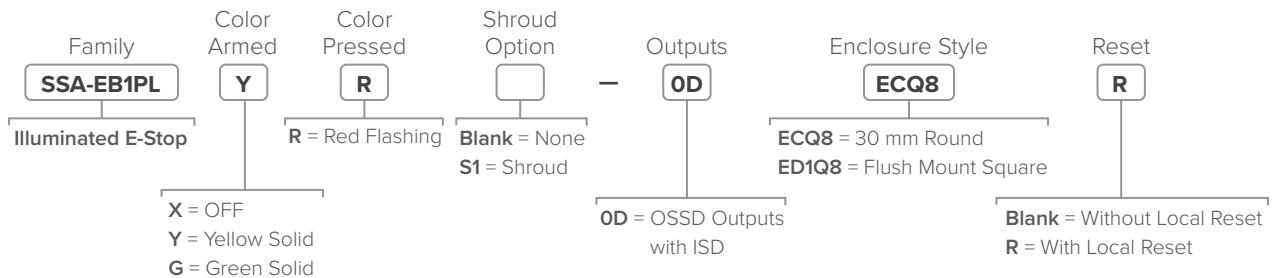

NOTE: SI-RF-A Actuator is required to complete a sensor solution. Ordered separately.

* Tamper Resistant Coding

- Low (L)—The SI-RF Safety Switch accepts any SI-RF-A Actuator
- High (H)—The SI-RF Safety Switch only accepts the last taught-in actuator, a maximum of 12 teach-in processes are possible
- Unique (U)—The SI-RF Safety Switch only accepts the taught-in actuator, and only one teach-in process is possible
